Indexed Universal Life Segment Detail Information (continued)

Important Notes:

The Index Growth Rate is the rate used in calculating the Indexed Credit, the amount to credit to a segment at segment maturity. At Segment Maturity, the Indexed Credit is calculated as the product of the Index Growth Rate calculated for that Segment multiplied by the average Segment value for that Segment Term. The Indexed Growth Rate also includes any multiplier but does not reflect any Indexed Account Charge. The percent change in the S&P 500 and Index Growth Rate shown have been rounded down to two decimal places.

Past performance does not predict the future performance of any index.
